### Message for National Engineering Month 2019

An engineering career can lead down many different paths. From design to construction to inventions (or even space exploration!)—engineering is how we improve the world in which we live. Engineering is a broad subject that touches many fields and it is a lot of fun! Engineers themselves are always thinking ahead: they develop strategies, conduct analyses and solve problems. They are behind every major project in our society!

In engineering, there is a place for you. A place where you can find your niche and contribute to the environment around you. All you need to begin is enthusiasm and passion. The rest can be learned.

National Engineering Month is a perfect time for all aspiring engineers to find out how to take the first steps toward a career in engineering. Through the activities organized all over the country during the month, you will discover what interests you and how to get involved. Learning about STEM (science, technology, engineering, math) is time well spent. It builds critical thinking and collaborative skills, and stimulates curiosity and creativity—all transferable talents that can help people, countries and societies succeed.

During National Engineering Month, aim high and dare to dream. And believe me—the sky is not the limit!
